MARKET EARTH TRINITY ENGINE

Account & Identity Map — Valor Jesson

Personal Day 1 Ready • Copy-Paste Friendly • Local → Mainnet

IMPORTANT — Read First

Real cryptographic identities (private keys) can only be created safely on **your own machine**. I cannot and will not generate real private keys for you — that would be insecure. This document gives you the exact structure, names, and commands so you can create everything cleanly under the name **Valor Jesson**.

01 Recommended Identity Names

Create these identities on your machine. Use clear names so you always know which one you are using.

Identity Name	Purpose	Command to Create
valor-jesson	Main personal identity (root)	`dfx identity new valor-jesson`
valor-dev	Local development & testing	`dfx identity new valor-dev`
valor-mainnet	Mainnet operations only	`dfx identity new valor-mainnet`
valor-treasury	Treasury / high-value ops (optional)	`dfx identity new valor-treasury`

After creating, switch to the main one:

```
dfx identity use valor-jesson
dfx identity whoami
```

02 Account Map Template (Fill After Creation)

Run the commands below after you create the identity. Paste the real values into the empty fields.

Field	Command to Get It	Your Value (paste here)
Active Identity	`dfx identity whoami`	_____
Principal ID	`dfx identity get-principal`	_____
ICP Ledger Account ID	`dfx ledger account-id`	_____
Local ICP Balance	`dfx ledger balance`	_____
Mainnet ICP Balance	`dfx ledger --network ic balance`	_____
Cycles Wallet (Local)	`dfx wallet balance`	_____
Cycles Wallet (Mainnet)	`dfx wallet --network ic balance`	_____
Trinity Engine Canister ID	`dfx canister id trinity_engine`	_____
MeCoin Canister ID	`dfx canister id me_coin`	_____
WeCoin Canister ID	`dfx canister id we_coin`	_____

03 Quick Start Commands (Copy-Paste)

Create main identity + switch to it

```
dfx identity new valor-jesson
dfx identity use valor-jesson
```

```
dfx identity get-principal
```

```
dfx ledger account-id
```

Full Treasury Audit (one command block)

```
echo "========== VALOR JESSON TREASURY AUDIT ==========" echo "Date: $(date)" echo "Identity: $(dfx identity whoami)" echo "Principal: $(dfx identity get-principal)" echo "Ledger Account: $(dfx ledger account-id)" echo "------------------------------------------------" echo "[1] Local ICP:" ; dfx ledger balance || echo "Local not running" echo "[2] Mainnet ICP:" ; dfx ledger --network ic balance || echo "Mainnet query failed" echo "[3] Local Cycles:" ; dfx wallet balance || echo "No local wallet" echo "[4] Trinity Metrics:" ; dfx canister call trinity_engine getSystemMetrics || echo "Not deployed" echo "================================================"
```

ICP Transfer Template

```
dfx ledger --network ic transfer --icp --memo 1
```

Send Cycles Template

```
dfx wallet --network ic send
```

04 Sanctuary Note (Health Layer)

This system only works if **you** are sustainable. Protect sleep, food, and recovery. When we work on the Engine, we work from a regulated nervous system — not from depletion. That is part of the architecture.
