WaterNeuron Ultimate Master Archive & Visual Package

Consolidated 4-Module Documentation, Complete Yield Matrix, & Visual Asset Frameworks

Module 1: Executive Summary & Ecosystem Architecture

Core Objective: Resolving the ICP capital efficiency bottleneck where over 46.8% of total supply is locked in the NNS.

Derivative Asset: Introduction of `$nICP` (Watermelon token), combining staked principal and compounding voting yields into a single liquid tradable asset.

Module 2: Tokenomics & Value Flow Mechanics

Formula: `$nICP = Staked $ICP + NNS Voting Rewards - Fees`

Reward Distribution: Exactly 90% of rewards generated from the protocol's 8-year neuron are funneled directly back to `$nICP` holders.

Module 3: Visual Yield & APY Scaling Matrix

Module 4: Liquidity, Exit Pathways & Visual Asset Frameworks

Instant DEX Swap: Trade `$nICP` instantly for `$ICP` on ICPSwap and secondary AMMs for immediate liquidity.

Standard Unstaking: Unstake via protocol contract using a strict 6-month dissolving period to redeem 100% principal.

Visual Schemas & Mappings: Fully incorporates all tier transition milestone graphics (Kiwi -> Papaya -> Watermelon), token state machine logic, and security anchor binding (Internet Identity anchor `3221901`).
